

**CBSE Class–VI Subject Science**  
**NCERT Solutions**  
**(CHAPTER-14)**  
**WATER**

---

**Question 1. Fill up the blanks in the following:**

- (a) The process of changing of water into its vapour is called -----.
- (b) The process of changing water vapour into water is called -----.
- (c) No rainfall for a year or more may lead to----- in that region.
- (d) Excessive rains may cause -----.

**Answer:** (a) The process of changing of water into its vapour is called **evaporation**.

(b) The process of changing water vapour into water is called **condensation**.

(c) No rainfall for a year or more may lead to **drought** in that region.

(d) Excessive rains may cause **flood**.

**Question 2. State for each of the following whether it is due to evaporation or condensation:**

- (a) Water drops appear on the outer surface of a glass containing cold water.
- (b) Steam rising from wet clothes while they are ironed.
- (c) Fog appearing on a cold winter morning.
- (d) Blackboard dries up after wiping it.
- (e) Steam rising from a hot girdle when water is sprinkled on it.

**Answer:** (a) Condensation.

(b) Evaporation

(c) Condensation

(d) Evaporation

(e) Evaporation

**Question 3. Which of the following statements are “true”?**

(a) Water vapour is present in air only during the monsoon.

(b) Water evaporates into air from oceans, rivers and lakes but not from the soil.

(c) The process of water changing into its vapour, is called evaporation.

(d) The evaporation of water takes place only in sunlight.

(e) Water vapour condenses to form tiny water droplets of water in the upper layers of air where it is cooler.

**Answer:** (a) False, (b) False, (c) True, (d) False, (e) True.

**Question 4. Suppose you want to dry your school uniform quickly. Would spreading it near an anghiti or heater help? If yes, how?**

**Answer:** Yes, spreading it near an anghiti or heater will surely help as heater and anghiti are source of heat which vaporize the water of the wet clothes and thus help in drying.

**Question 5. Take out a cooled bottle of water from refrigerator and keep it on a table. After some time you notice a puddle of water around it. Why?**

**Answer:** The puddle of water seen around the cooled bottle of water is due to the condensation effect as the water vapour present in the air around the bottle get condensed after colliding with bottle.

**Question 6. To clean their spectacles, people often breathe out on glasses to make them wet. Explain why the glasses become wet?**

**Answer:** When we breath out, water vapours also come out with exhaled air. These water vapours when come in contact with the glasses of spectacle make them wet.

**Question 7. How are clouds formed?**

**Answer:** The process of condensation plays an important role in formation of cloud. As water vapour goes higher from the surface of the earth, it gets cooler. When the air moves up, it gets cooler and cooler. At sufficient heights the air becomes so cool that the water vapour present in it condenses to form tiny water droplets. It is these tiny droplets that remain floating in air and appear to us as clouds.

**Question 8. When does a drought occur?**

**Answer:** If it does not rain for one or two years, the soil continuous to lose water by evaporation and transpiration. Since, it is not being brought back by rain, the soil becomes dry. The level of water in ponds and wells of the region goes down and some of them may even dry up. The ground water may also become scare. This may lead to drought.
